Description

Rich text editor toolbar with buttons for Bold, Italic, Underline, Bulleted List, Numbered List, and Link.

This thesis investigated the lifespan development of a key skill in foreign language learning and receptive multilingualism: the ability to make sense of isolated written and spoken words in an unknown language but with cognates in known languages. Of specific interest was the question of how such age-related developments in this skill could be attributed to cognitive and linguistic factors. The data from a Swedish cognate guessing task administered to a cross-sectional sample of multilingual Swiss-German participants aged 10 to 86 years were analysed from three vantage points: first with respect to the inter-individual differences in cognate guessing performance, second with respect to between-item differences in overall cognate guessing accuracy and lastly focussing on the interplay between participant- and item-related characteristics.

Subject, Category, Geographic Coverage, and Language sections with dropdown menus and expand/collapse buttons.

Electronic Resources
